(In-)visibility of women in science: historical perspectives

Today the visibility of women in science is far from matching the numbers of women actually engaged in scientific work. This situation is the outcome of a long history: there were indeed women engaged in science in the past, and despite their historical invisibility, historians of science have developed strategies to make them visible. Moreover, the research strategies developed to study these women of science of the past provide inspiration for endeavors to increase the visibility of women of science of the present, and to increase the number of women in science in the future.

Agenda

Welcome by SCGES & Introduction by Catherine Jami

Patricia Fara: “Tomorrow Began Yesterday: Why History Matters”

Brigitte Stenhouse: “Navigating Gendered Barriers to Scientific Knowledge Through Spousal Cooperation: Mrs and Mr Mary Sommerville”

Indianara Silva: “Visibility of Women in Science, for an Anti-oppressive World”

Webinar chaired by Catherine Jami

Date and Time

Friday
December 16th, 2022
4-6 PM CET
